## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9 and 14-20, drawn to apparatus for detection of nucleotide hybridization, classified in class 204, subclass 194.
  - II. Claims 10-13, drawn to methods of detecting hybridization of nucleotides bound to the surface of a working electrode, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of groups 2 and 1 are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, method of detecting hybridization of nucleotides bound to the surface of a working electrode can be practiced by an apparatus of a streptavidin-modified gold electrode with reference and counter electrodes and a multi-potentiostat. The search for each group presents a serious search burden as the searches for each are not coextensive in scope. Art relating to the apparatus for detection of nucleotide hybridization of group 1 would not necessarily provide art related

Art Unit: 1634

to the methods of detecting hybridization of nucleotides bound to the surface of a working electrode of group 2.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for each group is not coextensive, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas O'Farrell whose telephone number is (571)
